

Orange City electric committee will have two 120v outlets available and two 240v outlets available. The 120v outlets are GFI protected, so if there are any plugs you may have are without grounds it may trip the breakers.

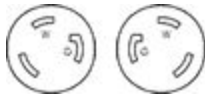

Please place a check next to the outlet below that you will be needing. If there are any special requests that meet the NESC we will see what can be done, but no guarantees. Or you should have adapters made before you get here. These have to be returned and accepted by the Vender committee by June 1st, 2017.
